Two-Stage OF Series: 90 - 450 kW

Two-Stage OF-A Series: 45 - 300 kW

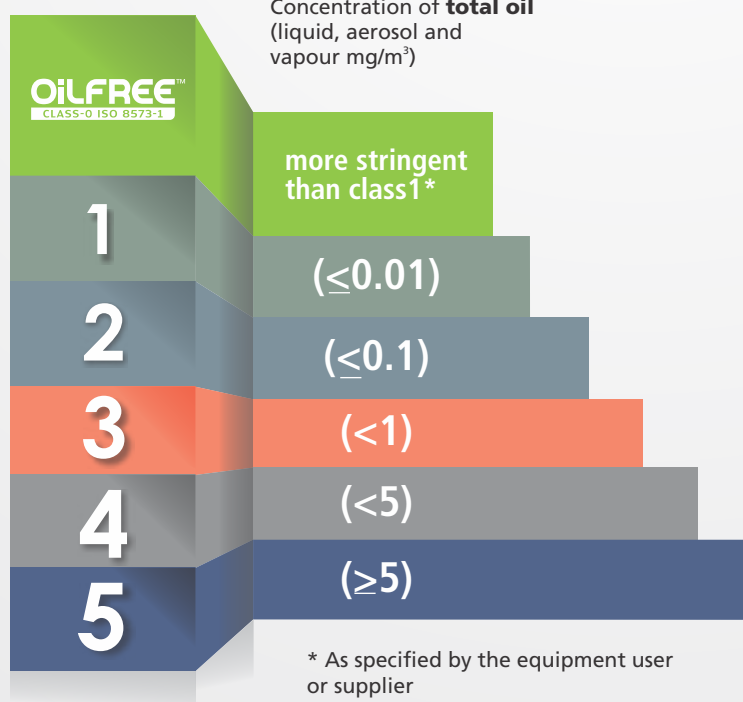

"I need oil free air quality of Class Zero with no breakdowns and workable economics. The UPTIME assurance from ELGi ensures my requirements are satisfied. "

OilFREE™
CLASS-0 ISO 8573-1

UPTIME™
ASSURANCE

The Dual Advantage

Class '0' Oil free air per ISO: 8573-1

ELGi Oil free Technology

ELGi is one of the very few compressor companies to design and manufacture oil-free airends. With in-house oil-free technology, the compressors are engineered to deliver maximum uptime and reliability. ELGi's unique eta-V rotor design reduces pressure losses and increases stage efficiencies, leading to an optimized compressed air system.

Optimized component layout of the OF series machine provides easy serviceability with reduced service time. Incorporating superior safety norms, the compressors have not only low energy losses and low air outlet temperatures but are also highly reliable and compact. All these advanced features integrated into one simple design that drives maximum Reliability and Uptime.

UPTIMETM

ASSURANCE

It's not just about delivering air It's about delivering UPTIMETM

Applications

Oil free air is required where there is absolute intolerance of oil vapour presence in the entire manufacturing process

AUTOMOTIVE

UPTIME
Design

ELGi's UPTIME Design

With Rack and Pinion capacity control system, there is no maintenance for over one million cycles lower cost of ownership

Without two-step control

With rack and pinion control

Gives an edge to operate numerous cycles in a minute with reduction in pressure band. This saves energy and maintains pressure discharge.

Reliability / Working Conditions

- Lower speed of airend **Gives better reliability due to lower gear ratio**
- Usage of rigid Stainless Steel tubes **Improves product reliability and reduce maintenance**
- Reduced pressure differential. Load unload pressure differential is 0.2 bar g **Reduces stress on the motor**
- Tropical design **Ensures reliable operation at severe working temperatures (-5°C to 45°C)**

Efficiency/Cost of Ownership

Low life cycle cost- High energy efficiency design delivering maximum UPTIME and lower cost of ownership

- Operates on low pressure cooling-water head **Reduced power consumption of feed water pumps**
- Lower temperature differential of cooling water **Power saving by reduced cooling water pump sizing**
- Optimized airend design **Deliver best efficiency of its class at different pressures and quicker return on investment**
- The OF series compressor package ensures that cooling water in-out temperature differential is only 8°C compared to other conventional systems of 14°C **Ensures lower thermal stress to the system, better fouling factor and lower cost of ownership**

Consistent Air Quality

Consistent oil-free air meeting ISO8573-1 class 0 oil standards.

- Food grade coating is done where air contacts metal surface inside the compressor **Ensures consistent oil-free air without metal debris**
- Pipes have special e-coating **Ensures consistently clean and oil-free air**
- Optimized rotor clearances **Ensures consistent air delivery**

UPTIME Design

Intelligent control for consistent air quality And increased UPTIME

- Reliability of the entire system is ensured by using a dedicated programmable Logic Controller (PLC)
- The PLC uses more than 15 safety interlocks gathering input from analog and digital modules

PLC - Optional with customized solutions

Add on features:

- DCS connectivity with Modbus
- Customized in-line with client requirement
- Shock pulse monitoring system

OILFREE™
CLASS-0 ISO 8573-1

SCADA / CCP

UPTIME

Components

Every component in ELGi OF series starting from design, manufacturing till quality testing embody the philosophy of UPTIME ASSURANCE. The materials used ensure long life, reliability and ruggedness under wide ambient conditions to provide you with oil-free air for uninterrupted and seamless productivity.

Bearings

- Special bearings running at relatively low speeds and high temperatures
- Optimized for oil free compressor speeds and temperatures considering the load and unload conditions.

Oil-Seal

- Non-contact type Visco seals made of Bronze
- Helical grooves cut with helix direction opposite to rotor rotation to prevent oil entry into compression chamber

Casing

- Completely coated with PP[®] coating (food grade)
- Water jackets are also coated with the same coating

Coolers

- Cupronickel coolers with water-in-tube system, designed for temperature difference of max. 8°C
- Least fouling factor in its kind with best thermal efficiency

Rotor

- Patented eta-V profile with 3/5 lobe for high swept volume and lower pressure ratio
- Rotor operate at lower speed due to the patented profile and less inter-lobe Leakages
- Rotor and housing are coated with PTFE based food-grade PP® coating to resist corrosion and endure high temperatures up to 250°C. This results in optimum long term performance with no loss in efficiency.

Capacity Control Valve

- Hydraulic rack and pinion type actuation
- Valve membrane made of stainless steel metal instead of elastomer
- More than one million cycles life tested
- Simultaneous closing of inlet valve and opening of blow-off valve by rack and pinion to ensure safety and air-end life
- Lesser maintenance compared to electrically actuated valves

Air Seal

- Carbon impregnated SS floating type seals
- Axially locked by Belleville spring and radially locked by compressed air

Oil Pump

- Separate motor powered oil pump ensures lubrication before and during start of machine (ensuring no dry running of gears and bearings)
- All oil tubing is made of Stainless Steel to increase reliability

Timing Gears

- Helical gears, precision ground to DIN 4 quality and case hardened to minimize transmission losses and noise during operation
- Dynamically balanced to reduce vibrations by optimizing the loads on bearings and increase bearing life

UPTIME Assurance

Uptime Assurance Plan

48⁺-hour parts availability» Parts availability shouldn't be a limiting factor for your business. So all ELGi distributors stock high volumes of replacement filters and parts. However, if they don't have a specific part available, we'll ship it to you within 48⁺ hours.

Competitive parts pricing» Genuine ELGi replacement parts and consumables (filters, oil etc.,) are key to protecting your OF series compressor and providing maximum uptime. That's why we offer them at competitive prices.

Loaner machines* » If your compressor goes down, we'll have it repaired within 48⁺-hours or we can offer you use of a loaner machine while yours is being repaired.

Customer Hotline» When you have service questions, you want to speak to a person, not a machine. You also want that person to be local and knowledgeable. That's why our customer hotline is staffed by industry professionals who know our products, and your business.

* Subject to conditions.

Downstream Accessories

ELGi provides a wide range of air-cure solutions for specific down stream air requirements

AiRMATE™
AIR ACCESSORIES

Downstream filter

- Capacity : 19-1200 cfm
- Working pressure : 7-60 bar
- Filtration range: 1-3 microns

Drain valves

- Working pressure : 7-13 bar

Air receiver

- Capacity : 250-10000 ltrs.
- Working pressure : 7-60 bar
- Code of construction: ASME sec. VIII Div.I or IS 2825

Refrigeration air dryer

- Capacity : 10-2000 cfm
- Working pressure : 7-60 bar
- Min. Dew point: +3°C. PDP

AND SUSTAINABLE FUTURE**

CONSERVE™
ENERGY EFFICIENCY

CONSERVE™ ENERGY SAVING ACCESSORIES

ENERGY EFFICIENCY

Variable Frequency Drives (VFD)

The ELGi CONSERVE VFD matches the compressor output to air demand by varying motor speed and hence the power consumption of the compressor reduces in line with the reduction in demand. The VFD eliminates frequent load-unload cycle and minimizes power wastage there by saving energy cost.

A fixed speed compressor operates on a load unload band of at least 0.5 bar (g) around the working pressure whereas with ELGi VFD, compressor can be operated within a band of 0.1 bar (g). Since the compressor is not operated under higher than working pressure requirements, there is substantial energy saving. Approximately, For every 0.1 bar (g) reduction in operating pressure, there is 1% power saving.

In a fixed speed compressor with Star-Delta starter, starting current is as high as three times the full load current (FLC). With ELGi VFD, starting current is less than the FLC. This helps to avoid using higher ratings of allied components like fuses, MCCB, cable size, generator rating, isolators etc.

For compressed air systems with fluctuating demand pattern, return on additional capital investment due to energy saved can be within few months.

Advantages:

Electrical:

- Low starting current
- High efficiency
- Improved power factor
- Reduced maximum demand
- Inverter with Harmonics filter

Mechanical:

- Minimum maintenance
- Reduced mechanical wear
- Smooth start
- Smooth control

Note:

- Free Air Delivery (FAD) are tested as per ISO 1217 : 2009 - Annex C
- FAD indicated is for the full package measured at the outlet
- The water inlet pressure min to max is 2 bar(g) to 3.5 bar(g)
- The cooling water temperature rise is 8°C
- Weight indicated is approximate and actual can vary significantly
- Due to continuous improvements, specifications are subject to change without prior notice
- Displayed here is the standard range. For customized packages with different voltages, medium and high voltage motor, pressure variants (4.5 - 10 bar g for two stage machines), please contact our nearest sales office
- All standard packages can be offered with built in VFD. Please contact our nearest sales office for specifications and turndown details
- All mentioned packages are water cooled models only.
- The ambient temperature operating conditions -5°C to 45°C
- All motors can be supplied for various country standards like ABNT, NEMA and IEC however packages(dimension & weight) may vary

1 : OF - 90 NEMA spec motor nominal power is 125 HP

- Free Air Delivery (FAD) are tested as per ISO 1217 : 2009 - Annex C
- FAD indicated is for the full package measured at the outlet
- The water inlet pressure min to max is 14.3 psi to 36 psi
- The cooling water temperature rise is 14°F
- Weight indicated is approximate and actual can vary significantly
- Displayed here is the standard range. For customized packages with different voltages , medium and high voltage motor, pressure variants (50 - 130 psi for two stage machines), please contact our nearest sales office
- All standard packages can be offered with built in VFD. Please contact our nearest sales office for specifications and turndown details
- All mentioned packages are water cooled models only
- The ambient temperature operating conditions 23°F to 113°F
- All motors can be supplied for various country standards like ABNT, NEMA and IEC however packages(dimension & weight) may vary
- Due to continuous improvements, specifications are subject to change without prior notice

Compressed air solutions for all sustainable air needs

Oil-Free Series Screw
90 - 450 kW / 480 - 2515 cfm

EG Series Rotary Screw
11 - 250 kW / 47 - 1612 cfm

EN Series Rotary Screw
2.2 - 75 kW / 8.0 - 469 cfm

Electric Portable (Trolley)
22 - 75 kW / 131 - 490 cfm

Diesel portable (Trolley)
185 - 1100 cfm / 100 - 300 psi

Diesel Portable (Skid)
475 - 1500 cfm / 150 - 400 psi

Oil-free Recip
1.0 - 75 HP / 1.8 - 300 cfm

Oil-lubricated Recip
1.0 - 40 HP / 2.0 - 128 cfm
